

Status and next steps

- Current contents have
 - THESEUS in landscape of current facilities
 - Science synergy themes
 - Synergy science topics
 - Exploring cosmic dawn
 - Transient astrophysics
 - Multi-messenger astronomy
 - Observational strategy – THESEUS strategy and implications for Athena
- Have still to pick figures (e.g. GRB rate with z ; IRT sensitivity etc.). Already have detailed simulations on rates of GRBs (long and short) plus estimates of other transients. Need to agree on boundaries with other sections.
- Schedule – aim to complete by third quarter this year? [ideally as then comes before M5 MSR when we will be busy!]
